

# AGUASAN Wheel

→ for the analysis and prioritization of decision-makers

**High influence: likely to have an impact**

**Medium influence**

**Low influence**

### How to analyse and prioritize decision-makers using the AGUASAN Wheel:

1. Identify all decision-makers that have a stake in a development objective and list them.
2. Write them on post-its and place them in the wheel according to a) their current involvement in the decision-making process and b) their influence on the decision and likelihood of having an impact on development objectives.
3. Focus on the inner first circle and target decision-makers that are not or only somehow involved. Your aim is to fully involve them in decision-making.
4. Then continue with the second circle and so on.
